

Used library:	<a href="https://www.npmjs.com/package/react-sketch">https://www.npmjs.com/package/react-sketch</a>
Methods and properties	Description
onSaveCanvas	Callback function that is called when the note is saved. It takes an object as arguments: { <b>data</b> : is the note in json format, <b>heightFactor</b> : is the number of pages }
defaultValue	Default initial data, to load. If value is set then value will be loaded instead
heightFactor	The initial number of pages in the note
getFullScreenStatus	Callback function called when fullscreen mode changes. Takes a boolean value in the arguments. <b>true</b> = fullscreen mode is on, <b>false</b> = fullscreen mode is off.
backgroundImages	An array of pictures to change the background. It is supposed to use only textures here to correctly fill the background.
onOpenNewWindow	Callback function that is called when the Scratch Pad is opened in a new window.
fullScreenHandlerDisabled	Boolean value. If the value is <b>true</b> then it will not be possible to enable fullscreen mode
onNotifyUsers	Callback function called when clicking the <b>notify users button</b>
prevDeviceWidth	The width of the device on which the note was saved. It is necessary for the correct display of the note when saving on devices with different resolutions.
prevDeviceHeight	Similar to prevDeviceWidth but for the height
